

GlenGuard® will not fade like Nomex® IIIA. We subjected GlenGuard and Nomex IIIA to different lightfastness tests. First we used an in-house Xenon colorfastness test of intense light for fade resistance, then we exposed each product to AATCC's 16E testing method which subjected each sample to 40 hours. Note the GlenGuard only shifts hue, whereas, the Nomex IIIA loses color in both tests.
